

Web application security masterclass

CYDWeb5d | 5 days | On-site or online | Hands-on

Your application written in any programming language works as intended, so you are done, right? But did you consider feeding in incorrect values? 16Gbs of data? A null? An apostrophe? Negative numbers, or specifically -1 or -2^{31} ? Because that's what the bad guys will do – and the list is far from complete.

Handling security needs a healthy level of paranoia, and this is what this course provides: a strong emotional engagement by lots of hands-on labs and stories from real life, all to substantially improve code hygiene. Mistakes, consequences, and best practices are our blood, sweat and tears.

The curriculum goes through the common Web application security issues following the OWASP Top Ten but goes far beyond it both in coverage and the details.

All this is put in the context of Java, and extended by core programming issues, discussing security pitfalls of the Java language.

So that you are prepared for the forces of the dark side.

So that nothing unexpected happens.

Nothing.

Cyber security skills and drills

38 LABS 18 CASE STUDIES

Preparedness

Group size 12 participants

General Web development

Outline

Audience

Web developers

- Cyber security basics
- The OWASP Top Ten 2021
- Security testing
- Wrap up

Standards and references

OWASP, CWE and Fortify Taxonomy

What you'll have learned

- Getting familiar with essential cyber security concepts
- Understanding how cryptography supports security
- Understanding Web application security issues
- Detailed analysis of the OWASP Top Ten elements
- Putting Web application security in the context of any programming language
- Going beyond the low hanging fruits
- Input validation approaches and principles
- Managing vulnerabilities in third party components
- Getting familiar with security testing techniques
 and tools

Table of contents

Day 1

> Cyber security basics

What is security?

Threat and risk

Cyber security threat types - the CIA triad

Consequences of insecure software Constraints and the market

> The OWASP Top Ten 2021

A01 - Broken Access Control

- Access control basics
- Missing or improper authorization
- Failure to restrict URL access
- ፊ Lab Failure to restrict URL access
- Confused deputy
 - Insecure direct object reference (IDOR)
 - Path traversal
 - 👙 Lab Insecure Direct Object Reference
 - Path traversal best practices
 - Authorization bypass through user-controlled keys
 - 🗟 Case study Authorization bypass on Facebook
 - 👙 Lab Horizontal authorization
- File upload
 - Unrestricted file upload
 - Good practices
 - 👙 Lab Unrestricted file upload
- Open redirects and forwards
 - Case study Hacking Fortnite accounts
 - 🗏 Case study Unvalidated redirect at Epic Games
 - Open redirects and forwards best practices
- <u>Cross-site Request Forgery (CSRF)</u>
 - 👙 Lab Cross-site Request Forgery

- CSRF best practices
- CSRF defense in depth
- 🝜 Lab CSRF protection with tokens

A02 - Cryptographic Failures

- Information exposure
 - Exposure through extracted data and aggregation
 - 🗟 Case study Strava data exposure
 - System information leakage
 - Leaking system information
 - Information exposure best practices
- Cryptography for developers
 - Cryptography basics
 - Elementary algorithms
 - Random number generation
 - Pseudo random number generators (PRNGs)
 - Cryptographically secure PRNGs
 - Seeding
 - Using virtual random streams
 - 👙 Lab Using random numbers
 - True random number generators (TRNG)
 - Assessing PRNG strength
 - 🗟 Case study Equifax credit account freeze

> The OWASP Top Ten 2021

A02 - Cryptographic Failures (continued)

- Cryptography for developers
 - Elementary algorithms
 - Hashing
 - Hashing basics
 - 🗟 Case study Shattered
 - Common hashing mistakes
 - 👙 Lab Hashing
 - Hash algorithms for password storage
 - Password storage algorithms and considerations
 - Best practices when using password hashing algorithms
 - Confidentiality protection (continued)
 - Confidentiality protection
 - Symmetric encryption

- Stream ciphers
- Block ciphers
- Modes of operation
- Modes of operation and IV best practices
- Best practices
- Best practices Using cryptographic storage
- 👙 Lab Symmetric encryption
- Asymmetric encryption
- The RSA algorithm
- Using RSA best practices
- · Combining symmetric and asymmetric algorithms
- Key exchange and agreement
- Key exchange
- Diffie-Hellman key agreement algorithm
- Key exchange pitfalls and best practices

A03 - Injection

- Input validation
 - Input validation principles
 - Denylists and allowlists
 - Data validation techniques
 - 🝜 Lab Input validation
 - What to validate the attack surface
 - Where to validate defense in depth
 - When to validate validation vs transformations
 - Output sanitization
 - Encoding challenges
 - Unicode challenges
 - 👙 Lab Encoding challenges
 - Validation with regex
- Injection
 - Injection principles
 - Injection attacks
- <u>SQL injection</u>
 - SQL injection basics

 - Attack techniques
 - Content-based blind SQL injection
 - Time-based blind SQL injection
 - SQL injection best practices
 - Input validation
 - Parameterized queries
 - 4 Lab Using prepared statements

- Database defense in depth
 - 🗟 Case study Hacking Fortnite accounts
- SQL injection protection and ORM
- Parameter manipulation
 - CRLF injection
 - HTTP header manipulation
 - HTTP response splitting

Day 3

> The OWASP Top Ten 2021

A03 - Injection (continued)

- Code injection
 - OS command injection
 - OS command injection best practices
 - 🗟 Case study Shellshock
 - 👙 Lab Shellshock
- HTML injection Cross-site scripting (XSS)
 - <u>Cross-site scripting basics</u>
 - Cross-site scripting types
 - Persistent cross-site scripting
 - Reflected cross-site scripting
 - Client-side (DOM-based) cross-site scripting
 - 👙 Lab Stored XSS
 - 👙 Lab Reflected XSS
 - 🗏 Case study XSS in Fortnite accounts
 - XSS protection best practices
 - Protection principles escaping
 - 🛃 Lab XSS fix / stored
 - 👙 Lab XSS fix / reflected
 - Client-side protection principles
 - Additional protection layers defense in depth

> The OWASP Top Ten 2021

A04 - Insecure Design

- Client-side security
 - Same Origin Policy
 - Simple request
 - Preflight request

- Cross-Origin Resource Sharing (CORS)
- Frame sandboxing
 - Cross-Frame Scripting (XFS) attacks
 - 🐠 Lab Clickjacking
 - Clickjacking beyond hijacking a click
 - Clickjacking protection best practices
- Content Security Policy
 - Directives in the HTTP response
 - Browser support
 - Resource control
 - Source whitelists
 - CSP best practices
- JSON security
 - JSON validation
 - JSON injection
 - Best practices
 - 🕫 Case study ReactJS vulnerability in HackerOne
- XML security
 - XML validation
 - XML injection
 - XPath injection
 - Blind XPath injection

A05 - Security Misconfiguration

- Configuration principles
- Server misconfiguration
- Cookie security
 - Cookie attributes
- XML entities
 - DTD and the entities
 - Entity expansion
 - External Entity Attack (XXE)
 - File inclusion with external entities
 - Server-Side Request Forgery with external entities
 - 🝜 Lab External entity attack
 - 📕 Case study XXE vulnerability in SAP Store
 - 🝜 Lab Prohibiting DTD

A06 - Vulnerable and Outdated Components

- Using vulnerable components
- Assessing the environment
- Hardening

- Untrusted functionality import
- Vulnerability management
 - Patch management
 - <u>Vulnerability management</u>
 - Vulnerability databases
 - <u>DevOps, the CI / CD build process and Software Composition Analysis</u>

Day 4

> The OWASP Top Ten 2021

A07 - Identification and Authentication Failures

- Authentication
 - Authentication basics
 - Multi-factor authentication (MFA)
 - Time-based One Time Passwords (TOTP)
 - 🗟 Case study PayPal 2FA bypass
- Session management
 - Session management essentials
 - Why do we protect session IDs Session hijacking
 - Session fixation
 - Session ID best practices
- Password management
 - Inbound password management
 - Storing account passwords
 - Password in transit
 - 👙 Lab Is just hashing passwords enough?
 - Dictionary attacks and brute forcing
 - Salting
 - Adaptive hash functions for password storage
 - Password policy
 - <u>NIST authenticator requirements for memorized secrets</u>
 - Password hardening
 - Using passphrases
 - 🗟 Case study The Ashley Madison data breach
 - 🗟 The ultimate crack
 - 🗟 Exploitation and the lessons learned
 - Password database migration
 - Outbound password management
 - Hard coded passwords
 - Best practices

- 🐠 Lab Hardcoded password
- Protecting sensitive information in memory
- Challenges in protecting memory

A08 - Software and Data Integrity Failures

- Integrity protection
 - Authenticity and non-repudiation
 - Message Authentication Code (MAC)
 - 👙 Lab Calculating MAC
 - Digital signature
 - Digital signature with RSA
 - Elliptic Curve Cryptography
 - ECC basics
 - ECC curves and pitfalls
 - Digital signature with ECC
 - 👙 Lab Digital signature with ECDSA
 - Authenticated encryption
 - Authenticated encryption modes of operation
 - Authenticated encryption modes of operation: CCM
 - Authenticated encryption modes of operation: GCM
- Public Key Infrastructure (PKI)
 - Some further key management challenges
 - Certificates
 - Certificates and PKI
 - X.509 certificates
 - Chain of trust
 - PKI actors and procedures
 - Enrollment and identification
 - Inappropriate certificate validation
 - PGP Web of Trust
 - Certificate pinning
 - Certificate revocation
 - 👙 Lab Certificate chain validation vulnerabilities
 - 👙 Lab CA certificate pinning

Day 5

> The OWASP Top Ten 2021

A08 - Software and Data Integrity Failures

- Transport security
 - The TLS protocol

- TLS basics
- TLS features (changes in v1.3)
- The handshake in a nutshell (v1.3)
- TLS best practices
- 👙 Lab Using a secure socket
- HTTP Strict Transport Security (HSTS)
- Subresource integrity
 - Importing JavaScript
 - 👙 Lab Importing JavaScript
 - 💐 Case study The British Airways data breach
- Insecure deserialization
 - Serialization and deserialization challenges
 - Integrity deserializing untrusted streams
 - Integrity deserialization best practices
 - Property Oriented Programming (POP)
 - Creating a POP payload
 - 👙 Lab Creating a POP payload
 - 👙 Lab Using the POP payload
 - Summary POP best practices

A09 - Security Logging and Monitoring Failures

- Logging and monitoring principles
- Insufficient logging
- 🗏 Case study Plaintext passwords at Facebook
- Log forging
- Log forging best practices
- Logging best practices
- Monitoring best practices
- Firewalls and Web Application Firewalls (WAF)
- Intrusion detection and prevention
- 🗏 Case study The Marriott Starwood data breach

A10 - Server-side Request Forgery (SSRF)

- Server-side Request Forgery (SSRF)
- 🗏 Case study SSRF and the Capital One breach

Web application security beyond the Top Ten

- Denial of service
 - Flooding
 - Resource exhaustion
 - Sustained client engagement
 - Infinite loop

- Economic Denial of Sustainability (EDoS)
- Amplification
 - Some amplification examples
- Algorithmic complexity issues
 - Regular expression denial of service (ReDoS)
 - 🐠 Lab ReDoS
 - Dealing with ReDoS
 - Hash table collision
 - How do hash tables work?
 - Hash collision against hash tables

> Security testing

Security testing techniques and tools

- Code analysis
 - Security aspects of code review
 - The OWASP Code Review methodology
 - Static Application Security Testing (SAST)
- Dynamic analysis
 - Security testing at runtime
 - Penetration testing
 - Stress testing
 - Dynamic analysis tools
 - Dynamic Application Security Testing (DAST)
 - Web vulnerability scanners
 - 🔄 Lab Using web vulnerability scanners

Finding specific vulnerabilities

- Cross-site scripting (XSS)
 - Testing for XSS with tools
 - 👙 Lab Using XSS testing tools
 - SQL injection
 - SQL injection tools
 - 👙 Lab Using SQL injection tools
 - Fuzzing

Proxies and sniffing

- Proxy servers and sniffers
- Sniffing tools and considerations
- 👙 Lab Using a proxy

Password auditing

• Using password cracking tools

- Password cracking in Windows
- 🝜 Lab Password audit with John the Ripper

> Wrap up

Secure coding principles

• Principles of robust programming by Matt Bishop

And now what?

• Software security sources and further reading
